                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to novel genes (ABL89449-ABL90853) and proteins (ABB89040-ABB90444) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic

                                                                                                                                                                                                                                                                           The present sequence is the sequence of a human secreted protein. Its coding sequences of the invention can be used in the isolation of similar genes and proteins, in the elucidation of their function in vivo, and to treat a number of conditions. It is possible that they may have uses as nutritional supplements, as cytokine or cell proliferation factors, in immune modulation, where they may be used to treat immune and autoimmune diseases, as haematopoiesis regulators (treating myeloid or lymphoid cell deficiencies), in the promotion of tissue growth, they may have chemokine or chemotactic activity, haemostatic or thrombolytic activity, or anti-

The present sequence is named polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with prevention, diagnosis and treatment of diseases associated with correct the polypeptide expression. The polypucleotides may be used to produce the polypeptide, by inserting the mucleic acids into a host cell complementery sequences may also be used as DNA probes in diagnostic assays and also used in gene therapy. The polypeptides may also be used as antigens in the production of antibodies and in assays to identify as antigens in the production of antibodies and in assays to identify concluder of polypeptide expression and activity. The polypeptides and mucleic acids may be used as nutritional supplements, to modulate cytokine and cell proliferation activity, to modulate immune stimulation or suppression (e.g. for the treatment of microbial infections and autonimume disorders such as multiple sclerosis, rheumatoid architic and inside growth activity (e.g. for the treatment of Parkinson's disease, Huntington's disease and Alzheimer's disease), to modulate activin and inhibin activity (e.g. for controlling fertility), to modulate activin and chemokantic and chemokantic activity, to modulate activity chemokantic and chemokantic activity, to modulate activity controlling fertility activity (e.g. for controlling fertility) and activity (e.g. for controlling fertility).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          53 AGDEVQTLSGSVRRAPTGP-PGTPGCAATAKGPGAQQPKPASLGR-----GRGA-A 104

                                                                                                                                                                                                                                                                                                  The present sequence is transporter and ion channel-12 (TRICH-12) protein. TRICH is used as vaccine. TRICH is useful for treating a dise or condition associated with decreased expression of functional TRICH,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention discloses one kind of human protein with cancer suppressing function, polymucleotides encoding the polypeptide and the recombinant process of producing the polypeptide. The polypeptide can be used in treating various discases, such as cancer. The present invention also discloses the agonist resisting the polypeptide and its treatment effect. This sequence represents one of the cancer suppressing proteins.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 7227, Application US/09328352
Sequence 7272, Application US/09328352
Patent No. 6562958
GENERAL INFORMATION:
APPLICANT: GATY L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUNANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-019A
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT PALLICATION DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NOS: 8252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                17;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠે
                                                                                                           Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: WICLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 13997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | | : : | : | : | : | : | : | : | 135 GVKSINDWYAQRERGTAVGIENSSTVLGQAIA-PPALVIMQLAWGWRTMFVVIGLAGIVV 193

Sequence 428, Application US/09711164
| Patent No. 6589738
| GENERAL INFORMATION: APPLICANT: POSSYTH, R. Allyn
| APPLICANT: Ohlsen, Kari
| APPLICANT: Zyskind, Judith
| TITLE OF INVENTION: GENES ESSENTIAL FOR MICROBIAL PROLIFERATION AND ANTISENSE THERE
                                                                                                                                                                                             RESULT 14

US-09-489-039A-12384

Sequence 12384, Application US/09489039A

Facquence 12384, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION:

TITLE OF INVENTION: PRECONCEC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

TITLE OF INVENTION: PREUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPRESENCE: 2709-2004001

CURRENT FILING DATE: 2000-01-27

PRIOR APPLICATION NUMBER: US 60/117,747

PRIOR PILING DATE: 1999-01-29

NUMBER OF SEQ ID NOS: 14342
